```
8   import SwiftDummyData
9   import SwiftUI
10
11  struct UsersView: View {
12      var body: some View {
13          List(DDUser.data) { user in
14              Text(user.id)
15          }
16      }
17  }
18
19  struct UserDetailsView: View {
20      let user: DDUser
21
22      var body: some View {
23          Text("Hello \(user.id)")
24      }
25  }
26
27  struct AnimalsView: View {
28      var body: some View {
29          List(DDAnimal.data) { animal in
30              Text(animal.id)
31          }
32      }
33  }
34
35  struct AnimalDetailsView: View {
36      let animal: DDAnimal
37      body: some View {
```

Very good. Tempo, depth and all. The layer by layer approach might be hard to follow, but of course, there is the replay option.

Awesome video accompanying the also well done blogpost on the same topic–thanks for your great work!
What changes would be required if you wanted to be able to mutate data though? I guess I'd have to pass in a binding into the DetailView–but so far I have not found out how to do that...

Very nice video.
Just what i needed for a project.

Thanks a lot.
